Report of Bacteriological Examination of Water Sample

Samples collected by - Gene Pabst
Date of Collection - 8/31/77
Place - 2800 N. Grant
Owner of water supply -
Date reported - 8/31/77

<u>Lab. No.</u>	<u>Source of Sample</u>	<u>Chlorine Residual ppm</u>	<u>Fecal Strep. Staphylococcus per 100 ml.</u>	<u>Fecal coliform/100 cc Membrane Filter Technique per 100 c.c.</u>	<u>Nitrate Nitrogen ppm</u>
188	Storm sewer		700	< 10	

The above examinations were made by the City of Springfield, Department of Public Health Laboratory in accordance with the latest edition of Standard Methods of Water Analysis of the American Public Health Association. At the time this examination was made, the sample _____ the limits acceptable for drinking purposes.

The safety of a water supply depends upon proper construction and protection against contamination. A favorable bacteriological analysis alone should not be accepted as conclusive evidence of the safety of a water supply unless a survey of the supply indicates no sanitary defects. It is recommended that a water supply used for drinking purposes be analyzed routinely.

Bacteriologist Gene Pabst
